What this standard covers

This standard specifies the chlor-alkali industry (PVC) general requirements for cleaner production. This standard will be cleaner production indicators into six categories, namely, the production technology and equipment requirements, resource and energy utilization index, product index, pollutant indicator (prior to the end of treatment), waste recycling and environmental management requirements. This standard applies to suspension (calcium carbide method and ethylene) production of PVC resin production general purpose cleaner production and cleaner production audit judgment of the potential and opportunities, cleaner production and cleaner production performance evaluation performance disclosure system for environmental impact assessment and environmental management systems such as emission permits. Using dichloroethane pyrolysis of PVC or vinyl chloride monomer production outsourcing companies can refer to ethylene.

Document data

International classification (ICS): 13.100.

Chinese classification (CCS): Z61.

Estimated length of the Chinese original: 11,132 words.
