Foreword

To implement the Environmental Protection Law of the People's Republic of China, the Law of the People's Republic of China on the Prevention and Control of Environmental Pollution by Solid Waste, and the Hazardous Waste the Regulations on the Administration of the Licensing License and the Regulations on the Administration of Medical Wastes shall strengthen the supervision and management of the operation process of the centralized incineration disposal facilities for medical wastes.

This standard is established to ensure the standardized operation of centralized incineration disposal facilities for medical waste.

This standard stipulates the supervision and management contents, procedures, requirements, and supervision and inspection methods for the operation of centralized incineration disposal facilities for medical wastes.

Appendix A of this standard is a normative appendix.

This standard was formulated by the Science and Technology Standards Department of the Ministry of Environmental Protection.

This standard is mainly drafted by. Shenyang Environmental Science Research Institute, Institute of High Energy Physics, Chinese Academy of Sciences, Environmental Protection Department of the Ministry of Environmental Protection Foreign cooperation center, National Environmental Protection Hazardous Waste Disposal Engineering Technology Center.

This standard was approved by the Ministry of Environmental Protection on December 29, 2009.

This standard has been implemented since March 1, 2010.

This standard is explained by the Ministry of Environmental Protection.

Technical specification for supervision and management of centralized operation of medical waste centralized incineration facilities (Trial)

1 Scope of application

This standard stipulates the procedures, requirements, contents and supervision and management methods for the supervision and management of the operation of centralized incineration disposal facilities for medical wastes.

Wait.

This standard applies to the supervision and management of the operation of centralized incineration disposal facilities for operational medical waste, and other medical waste incineration disposal facilities operate.

The supervision and management of the period can be carried out with reference to this standard.

2 Normative references

The contents of this standard refer to the terms in the following documents. For undated references, the valid version applies to this standard.

GB 3095 Ambient Air Quality Standard GB 3096 Acoustic Environmental Quality Standard

3 Definition of terms

The following terms and definitions apply to this standard.

3.1 Medical waste

Refers to the direct or indirect effects of various medical and health institutions in medical, prevention, health care, teaching, scientific research and other related activities.

Infectious, toxic, and other hazardous waste. The specific classification list is implemented in accordance with the Catalogue of Medical Waste Classification.

3.2 Centralized incineration disposal facilities

Refers to facilities that plan to construct and serve a certain area and use incineration methods to dispose of medical waste.

3.3 Supervision and management

Refers to the supervision and management of the operation process of medical waste incineration disposal facilities, which is the local environmental protection administrative department for protection and improvement.

Environment, a general term for activities such as supervision, inspection, and guidance for the operation of medical waste facilities.

3.4 Centralized incineration disposal unit for operational medical waste

Refers to the unit that meets the management scope of the "Administrative Measures for the Administration of Hazardous Wastes" and engages in the centralized incineration and disposal of medical wastes.

4 Supervision and management procedures and requirements

4.1

The administrative department of environmental protection of the people's government at or above the county level and other supervision and management departments for the prevention and control of environmental pollution by medical wastes, the right shall supervise and inspect the centralized incineration disposal facilities for medical wastes under the jurisdiction according to their respective duties.

4.2

Units for centralized incineration of medical wastes shall actively cooperate with environmental protection administrative departments and other medical waste pollution prevention and control work.

Supervise and manage the supervision and management activities, according to the corresponding supervision and management requirements, truthfully reflect the situation, provide the necessary information, and must not conceal, Lie, refuse, obstruct or delay.

4.3

The local environmental protection administrative department may implement the concentration of medical waste through written inspection, on-site inspection and remote monitoring.

Supervision and management of the operation of incineration disposal facilities.

4.4

Supervision and management includes seven stages of preparation, inspection, monitoring, comprehensive analysis, feedback, rectification and review. Local environmental protection the competent administrative department may modify the procedures for adjusting supervision and management and determine the corresponding implementation plan according to the actual and needs of the work.

1) The preparation phase should include two parts. material collection and supervision and management implementation plan preparation. Material collection includes business licenses, Institutional setup, staffing, institutionalization, facility construction and operation, overall pollutant discharge, and the signing with the entrusting unit the status of the contract, etc.; the implementation plan should be prepared on the basis of material collection, and the regulatory objects, regulatory contents, procedures, methods and
