Foreword

In order to carry out "Law of the People's Republic of China on Environmental Protection", "Law of the People's Republic of China on Prevention and Control of Atmospheric Pollution" and other laws and regulations, prevention and control ring Pollution, improve the quality of the environment, regulate the flue gas circulating fluidized bed flue gas desulfurization project construction and operation management, the development of this standard.

This standard specifies the flue gas circulating fluidized bed flue gas desulfurization project design, construction, acceptance, operation and maintenance of technical requirements.

This standard was first released in 2005, this is the first revision.

The main content of this revision.

- Expand the scope of the applicable industries;
- Perfecting and supplementing the general technical requirements applicable to various industries, eliminating the special technical requirements applicable only to the thermal power industry;
- According to the technical development, the technical contents of flue gas system and

absorption system were mainly adjusted, which supplemented the equipment selection requirements;

- According to the requirements of integration of desulphurization and dust removal, add the content of design selection specification of dust remover;
- Enrich the operation and maintenance of technical content;
- Improve the information appendix.

This standard Ministry of Environmental Protection Science and Technology Standards Division revised.

This standard is mainly drafted by. China Environmental Protection Industry Association, Fujian Long net Environmental Protection Co., Ltd., Wuhan Kaidi Electric Power Co., Ltd. Limited company, Beijing Institute of Labor Protection.

This standard MEP.2018 January 15 approved.

This standard since May 1, 2018 implementation.

This standard is interpreted by the MEP.

General technical specifications for flue gas desulfurization by flue gas circulating fluidized bed method

1 Scope of application

This standard specifies the flue gas circulating fluidized bed flue gas desulfurization project design, construction, acceptance, operation and maintenance of technical requirements.

This standard applies to flue gas circulating fluidized bed flue gas desulfurization project can be used as construction project environmental impact assessment, environmental protection facilities Technical basis for calculation, construction, acceptance and operation management.

The technical requirements proposed by this standard are general and special requirements to implement the relevant technical specifications of the industry.

2 Normative references

This standard references the following documents in the terms. For undated references, the effective version applies to this standard.

GB 150 pressure vessel GB 912 carbon structural steel and low alloy structural steel hot rolled steel sheet and strip GB 2894 safety signs GB 4053 fixed steel ladders and platform safety requirements GB/T 4272 equipment and pipe insulation technology GB 5083 General safety and health design of production equipment GB/T 5750 drinking water health

3 Terms and definitions

3.1

flue gas circulating fluidized bed desulfurization process circulating fluidised bed flue gas desulphurization Refers to the use of circulating fluidized bed working principle, the absorbent containing material in the absorption tower to form a fluidized bed cycle, complete absorption Agents and flue gas SO₂ and other acid gases (including SO₃, HCl, HF, NO₂, etc.) reaction to achieve purifying flue gas desulfurization process.

3.2 Desulfurization project desulphurization project

Refers to the facilities, equipment, components and system integration required to remove the SO₂ and other sour gases from the flue gas through the absorbent.

3.3 Absorbent

Refers to the chemical reaction to remove SO₂ and other acid gases and other substances, usually calcium-based absorbent.

3.4 Absorber

Refers to the formation of circulating fluidized bed desulfurization project SO₂ and other acid gases and other harmful substances in the reaction device.

3.5 By-product

Refers to the absorbent and the flue gas SO₂ and other acidic gases generated after the reaction of substances.
