What this standard covers

This standard specifies the talc, chlorite, magnesite, and two or three kinds of material composition of the powder sample content of each phase X-ray diffraction method for quantitative determination of sample loading method, measurement parameters and calculation methods. This standard applies to contain talc, chlorite, magnesite powder mixed phase of the X-ray diffraction method quantitatively.

Document data

International classification (ICS): 73.080.

Chinese classification (CCS): D50;D59.

Estimated length of the Chinese original: 770 words.
