9.1 Microscopic examination and analysis
9.2 Calculation of common community parameters
9.3 Fill in the report
9.4 Statistical analysis and graphing

1 Foreword

HY/T 099-2007 was issued by State Oceanic Administration on 19 December 2007.

The HY/T prefix marks a recommended standard. It is not law in itself: it becomes binding when a contract names it, when a regulation or a mandatory standard refers to it, or when a producer declares conformity with it.

The document runs to 11 pages in English translation.

2 Scope Preview

This standard specifies the testing items, testing equipment, testing environmental conditions, and testing methods of seawater nutrient salt measuring instruments (hereinafter referred to as instruments) and the requirements for the preparation of test reports. This standard applies to the detection of seawater nutrient salt automatic measuring instruments used for a long time underwater.

HY/T 099-2007 is filed under Chinese Standard Classification N 92, in the field of instruments and meters.

This catalogue holds 43 other HY/T standards without an ICS number.

In this catalogue, HY/T standards carry edition years from 1992 to 2025.

3 About this standard

Issued by: State Oceanic Administration

English translation: about 11 pages

Chinese original: about 17,131 characters

4 Related standards

Standards on related subjects:

HY/T 071-2017 - Surface drifting buoy

HY/T 037-2017 - The specfication for marine data buoy operation

HY/T 092-2015 - Real-time transmission moored subsurface buoy system

5 Classification and status

International classification (ICS): 7.06

Chinese Standard Classification (CCS): N 92

Prefix HY/T: recommended standard.
