What this standard covers

This standard specifies the method for the determination, analysis and data processing of samples of iron, manganese, nickel, potassium, sodium, calcium and magnesium in marine sediments and organisms by atomic absorption spectrophotometry. This standard applies to the ocean, offshore, estuary, harbor and other deposits, organisms in the iron, manganese, nickel, potassium, sodium, calcium, magnesium content determination.

Document data

International classification (ICS): 07.060; 13.060.01.

Chinese classification (CCS): Z17.

Estimated length of the Chinese original: 16,194 words.
