What this standard covers

This standard specifies the terms and definitions for the measurement method of piston rod deflection of reciprocating piston compressors, specifies general requirements and measuring instrument requirements, describes the measurement method, and specifies the content of the measurement report. This standard is applicable to the measurement of piston rod deflection of reciprocating piston compressors with a piston force of not less than 78kN in the fields of petroleum, chemical, power and gas industries. The measurement of reciprocating piston compressors with a piston force of less than 78kN can be used as a reference.

Document data

International classification (ICS): 23.140.

Chinese classification (CCS): J72.

Estimated length of the Chinese original: 11,138 words.
