What this standard covers

This standard specifies the structural type, basic dimensions and technical requirements of steel back cast copper alloy inlaid solid lubricant bearings, and describes the corresponding test methods. This standard is applicable to the manufacture of sliding bearings made of centrifugally cast high-strength copper alloy materials on the surface of high-quality carbon structural steel as the matrix, and solid lubricants are evenly inlaid in the orderly arranged holes processed in the matrix.

Document data

International classification (ICS): 21.100.10.

Chinese classification (CCS): J12.
