Foreword

JB/T 15621-2026 is a recommended industry standard of the People's Republic of China in the Machinery sector, approved and issued by the Ministry of Industry and Information Technology on 1 June 2026, with effect from 1 December 2026.

It is administered by the National Technical Committee for Testing Machines Standardization.

Classification: ICS 19.100; CCS N78.

1 Scope

The document is a product standard for portable acoustic emission instruments. Acoustic emission testing picks up the elastic waves released when a material or structure is under load or developing defects, and this standard deals with the portable, hand-carried form of the instrument within the series on non-destructive testing instruments.

It is intended for manufacturers of acoustic emission instruments, for testing and inspection organizations that use them in the field, and for buyers who need a shared reference when specifying and accepting equipment. As a JB/T standard it is voluntary. It was approved by the Ministry of Industry and Information Technology, issued on 1 June 2026 and takes effect on 1 December 2026. It is a new standard.
