What this standard covers

This standard specifies the test equipment, test solution, specimens, test temperature, and test cycle for crevice corrosion testing of metallic materials used in instruments. It describes the test methods and specifies the test report. This standard applies to crevice corrosion testing of related alloys such as nickel-chromium alloys, nickel-chromium-molybdenum alloys, and nickel-chromium-molybdenum-iron alloys used in instruments, as well as stainless steel metallic materials.

Document data

International classification (ICS): 77.060.

Chinese classification (CCS): N05.

Supersedes the earlier edition JB/T 5326-1991.
