What this standard covers

This standard specifies the structure, corrugation shape, interface type, manufacturing materials, classification, specification series, marking, and technical requirements of metal bellows. It describes the corresponding test methods and specifies product inspection rules, marking, packaging, transportation, and storage. This standard applies to the manufacture of sensitive metal annular bellows used in instruments and sensors, and also to the manufacture of general-purpose metal annular bellows used in various compensators, sealing and isolating devices, elastic support devices, vibration dampers, and flexible connections.

Document data

International classification (ICS): 17.1.

Chinese classification (CCS): N11.

Supersedes the earlier edition JB/T 6169-2006.
