What this standard covers

This standard specifies the determination of pulverized coal ignition characteristics with special test equipment, and then make the determination of coal properties and thermal analyzer with Tube Furnace coal combustion method for determining the rate coefficients. Coal combustion characteristics of the data in this standard applies to the determination of the suspension of pulverized coal combustion equipment design and operation, as well as the calculation of the rate of combustion of pulverized coal charcoal, coal in pulverized coal combustion characteristics and burn rate indicates that the evaluation and so on.

Document data

International classification (ICS): 27.060.01.

Chinese classification (CCS): D21.

Estimated length of the Chinese original: 14,129 words.
