What this standard covers

This standard specifies the type, basic parameters, and technical requirements of cabinet-type fan coil units, describes the corresponding test methods, and specifies inspection rules, marking, packaging, transportation, and storage. This standard applies to the manufacture of units that use water (steam) as a cold or heat source, and whose coils are cooled or heated by air mixed with a fan, for the purpose of regulating indoor air. The manufacture of units using brine and ethylene glycol aqueous solutions as refrigerants, and units employing electric heaters, should refer to this standard. This standard does not apply to units with their own cold or heat sources.

Document data

International classification (ICS): 27.2.

Chinese classification (CCS): J73.

Supersedes the earlier edition JB/T 9066-1999.
