Foreword

JC/T 2934-2026 is a recommended industry standard of the People's Republic of China in the Building Materials sector, approved and issued by the Ministry of Industry and Information Technology on 18 March 2026, with effect from 1 September 2026.

It is administered by the Comprehensive Technical Committee for Building Materials Industry Standardization.

Classification: ICS 91.100.10; CCS Q11.

1 Scope

JC/T 2934-2026 is the technical specification for the preparation of combustibles from household waste for use in cement kilns. It sets out the general provisions, process technical requirements, provisions on pollutant treatment and emissions, and fire protection and occupational health and safety requirements. It applies to the production process in which household waste is pretreated into combustibles for cement kiln use.

The document is used by operators of waste pretreatment lines, by cement producers that receive such fuel, by engineering firms that design preparation plants, and by environmental, safety and quality supervisors. Its code carries the letter T, so it is a voluntary (recommended) standard and not a mandatory one. It was issued by the Ministry of Industry and Information Technology on 18 March 2026 and takes effect on 1 September 2026. It does not replace an earlier edition. The English translation of the full text gives foreign technology suppliers and waste management companies direct access to the Chinese provisions on preparing waste-derived fuel for cement kilns.
