Foreword

JC/T 2935-2026 is a recommended industry standard of the People's Republic of China in the Building Materials sector, approved and issued by the Ministry of Industry and Information Technology on 18 March 2026, with effect from 1 September 2026.

It is administered by the Comprehensive Technical Committee for Building Materials Industry Standardization.

Classification: ICS 13.020.10; CCS Z04.

1 Scope

JC/T 2935-2026 specifies how to assess the carbon dioxide emission reduction of project-based fuel substitution in cement clinker production. The assessment content includes the boundary, identification of emission sources, determination of scenarios, calculation of emission reductions, monitoring and data quality management, and preparation of the emission reduction assessment report. It applies to the assessment of carbon dioxide emission reduction of fuel substitution projects in the production of Portland cement clinker.

The document is used by cement producers that run fuel substitution projects, by carbon consultants and verification bodies that assess the reductions, and by project developers and investors. Its code carries the letter T, so it is a voluntary (recommended) standard and not a mandatory one. It was issued by the Ministry of Industry and Information Technology on 18 March 2026 and takes effect on 1 September 2026. It does not replace an earlier edition. The English translation of the full text lets foreign partners follow the Chinese method for assessing such projects.
