Foreword

JC/T 2936-2026 is a recommended industry standard of the People's Republic of China in the Building Materials sector, approved and issued by the Ministry of Industry and Information Technology on 18 March 2026, with effect from 1 September 2026.

It is administered by the Comprehensive Technical Committee for Building Materials Industry Standardization.

Classification: ICS 91.100.25; CCS F01.

1 Scope

JC/T 2936-2026 sets out the general principles, the content and requirements of energy saving diagnosis, and the diagnosis report for architectural and sanitary ceramics production enterprises. It applies to energy saving diagnosis carried out at architectural and sanitary ceramics enterprises, and other ceramics producers may follow it by reference.

The document is used by ceramics manufacturers that want to review their own energy use, by energy service companies and consultants who carry out the diagnosis and write the report, and by supervisors who review the results. Its code carries the letter T, so it is a voluntary (recommended) standard and not a mandatory one. It was issued by the Ministry of Industry and Information Technology on 18 March 2026 and takes effect on 1 September 2026. It does not replace an earlier edition. The English translation of the full text helps foreign ceramics producers, equipment makers and energy consultants understand what an energy saving diagnosis involves under Chinese practice.
