Foreword

JC/T 2937-2026 is a recommended industry standard of the People's Republic of China in the Building Materials sector, approved and issued by the Ministry of Industry and Information Technology on 18 March 2026, with effect from 1 September 2026.

It is administered by the Comprehensive Technical Committee for Building Materials Industry Standardization.

Classification: ICS 91.100.01; CCS Q04.

1 Scope

JC/T 2937-2026 sets out the methods and requirements for quantifying the carbon footprint of flat glass and its products. It covers the goal of the quantification, the scope, inventory analysis, impact assessment, interpretation of results, critical review, comparability, performance tracking and reporting. It applies to the carbon footprint quantification and evaluation of float glass, overflow glass, rolled glass, wired glass, tempered glass, laminated glass, coated glass and similar products.

The document is used by glass manufacturers, by sustainability and environmental product declaration specialists, by third-party reviewers, and by buyers who ask suppliers for carbon footprint data. Its code carries the letter T, so it is a voluntary (recommended) standard and not a mandatory one. It was issued by the Ministry of Industry and Information Technology on 18 March 2026 and takes effect on 1 September 2026. It does not replace an earlier edition. The English translation of the full text lets foreign customers and partners understand how Chinese glass products are assessed.
