Foreword

JC/T 2938-2026 is a recommended industry standard of the People's Republic of China in the Building Materials sector, approved and issued by the Ministry of Industry and Information Technology on 18 March 2026, with effect from 1 September 2026.

It is administered by the Comprehensive Technical Committee for Building Materials Industry Standardization.

Classification: ICS 91.100.99; CCS Q10/29.

1 Scope

JC/T 2938-2026 sets out the terms and definitions, the goal and scope, inventory analysis, impact assessment, interpretation of results, comparability, critical review, performance tracking and reporting for the carbon footprint of metal composite decorative materials. It applies to the carbon footprint quantification and evaluation of metal composite decorative materials. The document addresses a single impact category, climate change. It does not evaluate other potential environmental effects of the product life cycle, nor the social and economic effects that may arise over the life cycle.

The document is used by manufacturers of metal composite decorative materials, by sustainability specialists, by reviewers, and by buyers who need carbon footprint data. Its code carries the letter T, so it is a voluntary (recommended) standard and not a mandatory one. It was issued by the Ministry of Industry and Information Technology on 18 March 2026 and takes effect on 1 September 2026. It does not replace an earlier edition. The English translation of the full text serves foreign customers and partners.
