## Foreword

JC/T 2943-2026 is a recommended industry standard of the People's Republic of China in the Building Materials sector, approved and issued by the Ministry of Industry and Information Technology on 18 March 2026, with effect from 1 September 2026.

It is administered by the Comprehensive Technical Committee for Building Materials Industry Standardization.

Classification: ICS 91.100.01; CCS Q31.

## 1 Scope

JC/T 2943-2026 specifies the goal of quantification, the scope, inventory analysis, impact assessment, interpretation of results, critical review, comparability, performance tracking and reporting for the carbon footprint of architectural and sanitary ceramics products. It applies to the quantification and evaluation of the carbon footprint of these ceramics products.

The document is used by manufacturers of architectural and sanitary ceramics, by sustainability and environmental declaration specialists, by third-party reviewers, and by distributors and buyers who need carbon footprint data from their suppliers. Its code carries the letter T, so it is a voluntary (recommended) standard and not a mandatory one. It was issued by the Ministry of Industry and Information Technology on 18 March 2026 and takes effect on 1 September 2026. It does not replace an earlier edition. The English translation of the full text allows overseas importers, ceramics producers and consultants to follow the Chinese method for quantifying and reporting the carbon footprint of tiles and sanitary ware products.
