Introduction

"Static uniaxial testing machine model evaluation outline" framework reference the corresponding test machine state standards and inspection Set procedure consists of the following three parts.

1.JJF 1296.1-2011 of static uniaxial testing machine model evaluation framework - Part 1. electronic universal test Testing machine 2.JJF 1296.2-2011 of static uniaxial testing machine model evaluation framework - Part 2. hydraulic servo universal test Testing machine 3.JJF 1296.3-2011 of static uniaxial testing machine model evaluation framework - Part 3. Hydraulic universal test Testing machine when you use this syllabus for type evaluation test of static uniaxial testing machines, test should be based on the type of machine selection Outline the appropriate section.

This section is about the contents of electronic universal testing machine model evaluation, according JJF 1016-2009 "Measuring Instruments Type evaluation outline guidelines for the preparation ", JJF 1015-2002" Measuring Instruments type evaluation and type approval of universal norms " Requirements, according to the national standard GB/T 16491-2008 "electronic universal testing machine" and the national verification procedures JJG475-2008 "electronic universal testing machine" and compiled. Since the classification test machine more, type More complex, such as the use of the syllabus for type evaluation test does not completely cover all the weighing machine test requirements and technical when requested, should refer to the relevant corporate standards, manuals and other technical documents prepared outline additional provisions as type evaluation Based test.

Static uniaxial testing machine model evaluation outline Part 1. electronic universal testing machine

1 Scope

This outline is applied to the electronic universal testing machine, electronic tensile type approval (or pressure) tester.
