What this standard covers

This standard applies to (150 ~ 2500) MPa pressure within the pressure range of verification of measuring instruments. Within the pressure range specified composition baseline measurement apparatus and measurement apparatus pressure measuring instrument's name, measuring range and accuracy classes, use, reproduce magnitude uncertainty (or should achieve the best value transfer measurement capability), specifies formed a working pressure measuring instruments measuring instruments names, measurement range and accuracy class, purpose, provides pressure value by the national reference standards of measurement to pass through to the working methods and measuring instruments pass transfer process.

Document data

International classification (ICS): 17.100.

Chinese classification (CCS): A53.

Estimated length of the Chinese original: 9,916 words.

Supersedes the earlier edition JJG 2070-1990.
