What this standard covers

This standard stipulates the internal securities trading business message flow, interface design principles of securities and futures industry institutions, and the interface fields of entrusted transaction application layer messages. This standard is applicable to the internal system interface designed by securities and futures industry institutions to carry out securities transactions within the scope of regulatory requirements, mainly including internal centralized trading systems and peripheral terminal systems. This standard can also be used as a reference for the interface of the open securities platform and the system access of third-party institutions to the internal centralized trading system of securities and futures industry institutions.

Document data

International classification (ICS): 03.060.

Chinese classification (CCS): A11.
