What this standard covers

This standard specifies the capability framework for financial data security, comprising four capability domains: general data security assurance, data classification and grading management, data lifecycle security, and data security operational assurance. It categorizes the data security capabilities of financial institutions into five levels (from Level 1 to Level 5) across four dimensions: organizational structure, policies and processes, technical capabilities, and personnel capabilities. It also defines the construction objectives and corresponding capability requirements for each domain. This standard applies to the planning, implementation, and assessment of data security capability frameworks for financial institutions.

Document data

International classification (ICS): 03.060.

Chinese classification (CCS): A11.

Estimated length of the Chinese original: 23,218 words.
