What this standard covers

This standard specifies the procedures and methods for assessing the risk of oil spills on the water, including risk assessment preparation, risk identification, risk analysis, risk assessment, risk response and supervision and inspection. This standard is applicable to the risk assessment of water spill accidents in ships, port storage tanks, docks, loading and unloading stations, etc., and can be used as the technical basis for environmental risk assessment of regional and waterway engineering construction projects.

Document data

International classification (ICS): 03.220.40.

Chinese classification (CCS): R04.

Estimated length of the Chinese original: 20,281 words.
