What this standard covers

This standard specifies the technical requirements for differential information dissemination based on digital broadcasting in the transportation satellite navigation enhanced application system, including the broadcast mode, broadcast content and broadcast frequency. This standard is applicable to the provision of differential information for digital satellite-based transportation satellite navigation enhanced application systems and the design, development, production and use of related receiver modules.

Document data

International classification (ICS): 35.240.60.

Chinese classification (CCS): R07.

Estimated length of the Chinese original: 7,754 words.
