What this standard covers

This standard specifies the classification, testing instruments, testing methods, strength estimation and test reports for the non-destructive testing of high-strength concrete compressive strength of bridges. This standard applies to the detection of concrete structures or components of C50 ~ C100 strength grade. This standard does not apply to structures or components with significant differences in surface and internal quality or internal defects.

Document data

International classification (ICS): 93.040.

Chinese classification (CCS): P28.

Estimated length of the Chinese original: 13,171 words.
