What this standard covers

This standard specifies the general requirements for the monitoring of air pollutant emissions from ships, as well as the technical and equipment requirements for fuel sulfur content detection, ship-borne continuous monitoring, optical remote sensing monitoring and smoke plume contact monitoring. This standard is applicable to the on-site monitoring of atmospheric sulfur emissions carried out by sea-going vessels navigating in waters under the jurisdiction of the People's Republic of China.

Document data

International classification (ICS): 03.220.40.

Chinese classification (CCS): R04.

Estimated length of the Chinese original: 15,143 words.
