1 Foreword

KA 35-2026 was issued by National Mine Safety Administration on 27 April 2026.

It has been in force since 1 May 2026.

The document runs to 8 pages in English translation.

2 Scope Preview

This standard specifies the terms and definitions, classification and index determination, instruments and equipment, specimen specifications and quantities, testing procedures, data processing, and assessment criteria regarding the rockburst tendency of coal seam floor strata. This document applies to the classification of rockburst tendency in coal seam floor strata and the determination of rockburst tendency indices for floor strata from which standard specimens can be prepared under laboratory conditions.

KA 35-2026 falls under ICS 73.010, in the field of mining and minerals.

This catalogue holds 14 other KA standards in that field.

In this catalogue, KA standards carry edition years from 2025 to 2026.

3 About this standard

Issued by: National Mine Safety Administration

English translation: about 8 pages

Chinese original: about 12,191 characters

4 Related standards

Standards on related subjects:

YS/T 820.16-2012 - Methods for chemical analysis of laterite nickel ores - Part 16: Determination of carbon and sulfur content - High frequency combustion with infrared absorption spectrometry

YS/T 820.1-2012 - Methods for chemical analysis of laterite nickel ores - Part 1: Determination of nickel content - Flame atomic absorption spectrometry

YS/T 820.10-2012 - Methods for chemical analysis of laterite nickel ores - Part 10: Determination of calcium, cobalt, copper, magnesium, manganese, nickel, phosphate and zinc content - Inductively coupled plasma atomic emission spectrometry

5 Classification and status

International classification (ICS): 73.010

Chinese Standard Classification (CCS): D 04
