What this standard covers

This standard specifies terms and definitions, basic requirements, empirical scoring methods, statistical analysis methods, and the scope of application for various quantitative characterization methods regarding rockburst hazard. It applies to underground coal mines with potential or actual rockburst risks, covering the quantitative characterization of rockburst hazards in areas prior to, during, or after production.

Document data

International classification (ICS): 73.010.

Chinese classification (CCS): D20.

Estimated length of the Chinese original: 16,111 words.
