Foreword

This standard is based on GB/T 1.1-2009 "Standardization Work Guidelines Part 1. Structure and Compilation of Standards", GB/T.20001.3-2015 "Standard Writing Rules Part 3. Taxonomy" and GB/T 7027-2002 "Basic Principles and Methods of Information Classification and Coding" the Law, combined with China's current grain attributes for comprehensive coding.

This standard replaces LS/T 1702-2004 "Food Information Classification and Coding Food Property Classification and Code", and LS/T 1702-Compared with 2004, the main technical content changes are as follows.

--- Increased the content of normative references;

- Refined the properties of the reserve grain;
- Refined the properties of commodity grain;
- Increased policy food attributes.

This standard was proposed by the National Grain Administration.

This standard is under the jurisdiction of the National Grain and Oil Standardization Technical Committee (SAC/TC270).

This standard is mainly drafted by. Henan University of Technology.

Participated in the drafting of this standard. National Grain and Oil Information Center, Henan Provincial Grain Bureau, Hubei Grain Bureau.

1 Scope

This standard specifies the principles and methods of food industry classification, coding methods and code structure, grain attribute classification and code technology.

Claim.

This standard applies to information processing and information exchange in the food industry.

2 Normative references

The following documents are indispensable for the application of this document. For dated references, only dated versions apply to this article.

Pieces. For undated references, the latest edition (including all amendments) applies to this document.

LS/T 1713 Stock Food Identification Code

3 Classification principles and methods

3.1

Classification according to the basic attributes such as the nature of the reserve of the grain and the form of circulation.

3.2

Adopt line classification method.

4.1 Coding method

4.1.1

This standard uses a hierarchical code. The code is divided into three levels, each of which is named as a large class, a small class, and a fine class.

4.1.2

This standard code is represented by three Arabic numerals. Each layer is a single digit, and the third layer uses sequential code and serial sequence code.

4.1.3

For the code of the category name whose classification ends at a certain level in the middle, the information processing shall be supplemented with "0" to the total code length of the design (ie three digits).

word). Table 1 of this standard is not indicated by "0".

4.2 Code Structure

First class

Second class

x--- Code

Third layer

5 Food attribute classification and code table

The food attribute classification and code table are shown in Table 1.

Table 1 Food attribute classification and code table

Code name description

1 Reserve grain LS/T 1713

12 Local grain reserves

121 provincial (autonomous region, municipality) level local grain reserves 122 municipal (regional, autonomous prefecture, alliance) level local grain reserves 123 county (autonomous county, county-level city, flag, autonomous flag, municipal district, forest area, special zone) level local grain reserves

19 Other reserves

2 Commodity food

29 Other commodity grains

3 Policy food LS/T 1713

39 Other policy foods

9 Other food
