What this standard covers

This standard specifies the hot ethanol titrator method, cold solvent titrator method, calculation and representation and precision of the acid value and acidity of animal and vegetable oils by automatic titration analyzer. In this standard, the hot ethanol titrator method is the benchmark method and is applicable to all greases; the cold solvent titrator method is only applicable to light-colored greases. This standard does not apply to the determination of acidity and acidity of waxes.

Document data

International classification (ICS): 67.200.10.

Chinese classification (CCS): X14.

Estimated length of the Chinese original: 7,787 words.
