What this standard covers

This standard specifies the tropical forest ecosystem observations, namely meteorological conventional indicators, forest microclimate and gradient index, the forest atmospheric deposition targets, forest soil physical and chemical indicators of forest ecosystem health indicators, forest hydrology indicators and forest community characteristics index. This standard applies to our range of tropical forest ecosystem observation (not including coastal mudflats and tidal estuary on the distribution of mangroves).

Document data

International classification (ICS): 65.020.

Chinese classification (CCS): B65.

Estimated length of the Chinese original: 12,127 words.
