**INDUSTRY STANDARD OF THE
PEOPLE'S REPUBLIC OF CHINA**

LY/T 1818-2009

**Technical procedures for evaluation of natural forest protection
and construction program**

天然林资源保护工程建设评价技术规程
(English Translation)

Issued on: June 18, 2009

Implemented on: October 1, 2009

Issued by: State Forestry Administration

Table of Contents

- Foreword
- 1 Scope
- 2 Evaluation principles for the construction of natural forest resources protection projects
 - 2.1 Systematic
 - 2.2 Independence
 - 2.3 Comparability
 - 2.4 Authenticity
 - 2.5 Practicality
- 3 Evaluation content of natural forest resource protection project construction
 - 3.1 Evaluation of the implementation of natural forest resource protection projects
 - 3.2 Evaluation of the effectiveness of natural forest resource protection project construction
- 4 Evaluation index of natural forest resource protection project construction
 - 4.1 Evaluation index for implementation of natural forest resource protection projects

Foreword

Appendix A of this standard is a normative appendix.

This standard is proposed and managed by the Science and Technology Department of the State Forestry Administration.

This standard is interpreted by the Science and Technology Department of the State Forestry Administration.

This standard was drafted. Institute of Ecology and Environment, Chinese Academy of Forestry, Hebei Agricultural University.

1 Scope

The standard stipulates the principles, contents, evaluation indicators and evaluation methods for the evaluation of natural forest resource protection project construction.

This standard applies to natural forest resource protection projects approved by the state.

2.1 Systematic

The evaluation content and index system should comprehensively reflect the implementation of relevant regulations of natural forest resource protection projects, project implementation effects and project implementation.

Social, economic, and environmental impacts.

2.2 Independence

The content and indicators of the evaluation should be closely related to the content of the natural forest resource protection project, as well as the phase between the evaluation content and the evaluation index.

Mutual independence.

2.3 Comparability

Evaluation content, indicators and standards should have clear connotations and measurability.

2.4 Authenticity

The evaluation content, indicators and standards should be able to truly reflect and reflect the real situation of the natural forest resource protection project.

2.5 Practicality

Evaluation content, indicators and standards should be easy to operate and easy to grasp.

3 Evaluation content of natural forest resource protection project construction

From the natural forest resource protection project construction goals, construction content and tasks, expected purposes, schedule, and current natural forest resources protection Starting from the project management regulations, the evaluation content of this standard includes the following contents.

3.1 Evaluation of the implementation of natural forest resource protection projects

Organization and management of natural forest resource protection projects, natural forest bans or timber production reduction, forest management, public welfare forest construction, surplus employees the tasks such as flow placement, employee basic insurance social pooling, fund management and use are evaluated.

3.2 Evaluation of the effectiveness of natural forest resource protection project construction

Resource and environmental assessment of natural forest resource conservation projects, including timber production, forest management, public welfare forest construction, etc.

price. The evaluation of the socio-economic impact of the natural forest resource conservation project includes the economic and social impact assessment of the natural forest resource conservation project.

4.1.1 Natural forest resource protection target responsibility signing rate

The number of county-level people's governments (state-owned forestry bureaus, etc.) that have signed the target responsibility with the higher-level people's government or the competent forestry authorities the ratio of the total number of engineering counties (bureaus).

4.1.2 Job design rate

According to the project of public welfare forest construction determined by the implementation plan of the natural forest resource protection project, the area and operation total of the operation design were carried out.

The ratio of the product.
