4.1 Forest landscape resources and biodiversity conservation are effective

Foreword

This standard was drafted in accordance with the rules given in GB/T 1.1-2009.

This standard was proposed by the Science and Technology Development Center of the State Forestry Administration.

This standard is under the jurisdiction of the National Forest Sustainable Management and Forest Certification Standardization Technical Committee.

This standard was drafted. Beijing Forestry University, State Forestry Administration Science and Technology Development Center.

Introduction

Carrying out forest park ecological environment service certification is an important means to realize the sustainable development of forest parks in China, and is conducive to forest park management.

The organization understands its own management and management level, which is conducive to the timely management of the management effectiveness of the forest park by the industry management department, which is beneficial to the society.

Deep understanding of the ecological environment service functions of forest parks, and promote the sustainable management of forest parks, giving full play to forest parks in protecting forests the role of landscape resources and biodiversity, the dissemination of ecological culture and the development of forest ecological tourism.

This standard stipulates the indicator system that forest park ecological environment service certification should follow, including 6 first-level indicators and 32 second-level indicators.

101 three-level indicators.

China Forest Certification Forest Park Eco-environmental Services

1 Scope

This standard specifies the indicator system that forest parks should follow to carry out eco-environmental service certification.
