|---------------------------------------------------------------------------|--|
| Preface                                                                   |  |
| 1 Scope                                                                   |  |
| 2 Normative references                                                    |  |
| 3 Terms and Definitions                                                   |  |
| 4 General Requirements                                                    |  |
| 4.1 Purpose of the survey                                                 |  |
| 4.2 Investigation Principles                                              |  |
| 4.2.1 Principle of consistency                                            |  |
| 4.2.2 Principle of objectivity                                            |  |
| 4.2.3 Market-oriented principles                                          |  |
| 4.3 Investigation Task                                                    |  |
| 4.4 Survey subjects                                                       |  |
| 4.5 Survey cycle                                                          |  |
| 5 Survey Content                                                          |  |
| 5.1 Forest land value accounting survey                                   |  |
| 5.2 Forest Value Accounting Survey                                        |  |
| 6 Survey Methods                                                          |  |
| 6.1 Sampling Method                                                       |  |
| 6.2 Survey Implementation                                                 |  |
| 7 Questionnaire                                                           |  |
| 7.1 Forest Land Rent Questionnaire                                        |  |
| 7.2 Survey form for afforestation costs of dominant tree species (groups) |  |
| 7.3 Comprehensive Questionnaire on Timber Production                      |  |
| 7.4 Bamboo Forest Questionnaire                                           |  |
| 7.5 Comprehensive Questionnaire for Economic Forests                      |  |
| References                                                                |  |

## Foreword

This document is in accordance with the provisions of GB/T 1.1-2020 "Guidelines for standardization work Part 1: Structure and drafting rules for standardization documents" Drafting.

## 1 Scope

This document stipulates the overall requirements, survey content, survey methods and survey forms for the economic indicator survey of forest land and forest resources value accounting.

Formula, etc.

This document is applicable to the economic indicator survey work of forest land and tree resource value accounting carried out within the national or provincial administrative regions.

The economic indicator survey work on value accounting of forest land and forest resources carried out in administrative regions at the provincial or county level can be used as a reference for implementation.

## 2 Normative references

The contents of the following documents constitute the essential clauses of this document through normative references in this document.

For referenced documents without a date, only the version corresponding to that date applies to this document; for referenced documents without a date, the latest version (including all amendments) applies to this document.

GB/T 38590-2020 Technical regulations for continuous inventory of forest resources LY/T 2012-2012 Forest Species Classification LY/T 2407-2015 Technical Specification for Forest Resource Asset Assessment LY/T 2908-2017 Classification of age classes and age groups of main tree species

## 3 Terms and definitions

The following terms and definitions apply to this document.

Based on the basic principles of environmental economic accounting, forest land and forest resources are used as accounting objects, and forest resource surveys and forestry statistics are used as the basis.

The act of quantitatively describing the value of forest land and forest resources.

Economic indicator

The names and values of quantitative aspects of economic phenomena involved in forestry production activities related to the value accounting of forest land and trees.

Data investigation, analysis and reporting activities are carried out on economic indicators related to the main forestry production activities of the survey subjects.

#### **4.1 Purpose of the survey**

Understand the forestry production and management costs, market prices and management technical parameters of the whole country, provinces and regions, and improve the value of forest land and forest resources.

The authenticity and accuracy of the survey data can be calculated to meet the needs of national or provincial forest land and tree resource value accounting.
