Foreword

LY/T 3464-2026 is a recommended industry standard of the People's Republic of China in the Forestry sector, approved and issued by the National Forestry and Grassland Administration on 3 June 2026, with effect from 1 September 2026.

It is administered by the National Forestry and Grassland Administration.

Classification: ICS 65.020.01; CCS B40.

1 Scope

LY/T 3464-2026 sets out the technical regulations for no-tillage reseeding in degraded grassland. No-tillage reseeding sows seed into existing degraded grassland without ploughing it, as a way of restoring vegetation, and the document covers the technical work of carrying this out.

Grassland managers, herders' cooperatives, ecological restoration contractors, forestry and grassland authorities, and technical advisers can use it as a working reference, and inspectors can use it when checking restoration projects. It is a voluntary industry standard, as the /T in its code shows. It was issued by the National Forestry and Grassland Administration on 3 June 2026 and comes into force on 1 September 2026. It is a new standard.
