What this standard covers

This standard specifies the test scope, test objects, test environment and simulation test system requirements, test subjects and indicator requirements, test result evaluation and reporting, etc., for the distributed operation automation level test of civil unmanned aerial vehicle systems, and provides an example of test data interface protocol. This document applies to light, small, and medium-sized multi-rotor unmanned aerial vehicle systems operating in isolated airspace below 120 m true altitude, and is used to guide the distributed operation automation level test of automatic flight systems.

Document data

International classification (ICS): 49.020.

Chinese classification (CCS): V00.

Estimated length of the Chinese original: 34,337 words.
