What this standard covers

This standard specifies the security protection objects of industrial control systems for civil aviation production and operation, and specifies equipment-level security technical requirements for field equipment, control equipment, industrial hosts, network equipment, network security equipment, etc., as well as zoning and isolation protection, data and System-level security technical requirements such as communication security, security monitoring and emergency response, system operation and maintenance security, and software supply chain security. On the basis of complying with the relevant national and industry network security level protection requirements, this standard proposes technical requirements that, unless otherwise specified, are applicable to the network security planning, design, construction and operation of industrial control systems for civil aviation production and operation at the third level of protection and below. Maintenance can also be used as a basis for industry management departments to carry out supervision and inspection work.
