What this standard covers

This standard specifies the requirements for the design of logistics routes for light and small unmanned aircraft. This standard is applicable to the logistics operation of light and small unmanned aerial vehicles that use beyond visual range and distributed operations in urban scenarios. Note: The urban scene refers to the flying of unmanned aerial vehicles over the designated urban center and suburbs, or areas with densely populated non-agricultural populations other than the central city and suburbs.

Document data

International classification (ICS): 49.020.

Chinese classification (CCS): V00.

Estimated length of the Chinese original: 14,158 words.
