What this standard covers

This standard specifies the wired interoperability protocol requirements between VoIP voice communication switching systems such as those used in civil aviation air traffic services, and between these systems and VoIP wired telephone networks, VoIP dial-up telephone terminals, and other wired telephone network access gateway equipment. This standard applies to the construction, operation, design, manufacturing, integration, testing, and inspection of VoIP voice communication switching systems and VoIP wired telephone access gateway equipment used in civil aviation air traffic services.

Document data

International classification (ICS): 03.220.50.

Chinese classification (CCS): V54.

Estimated length of the Chinese original: 35,361 words.
