What this standard covers

This standard specifies the technical requirements for the connection of hardware and software systems within user access domains and application service domains to the aviation 5G airport surface broadband mobile communication system (hereinafter referred to as 5G AeroMACS) network. It applies to the development, testing, security protection, access authentication, and resource allocation of such hardware and software systems, as well as to the monitoring?by the 5G AeroMACS network access monitoring system?of the connection and usage of the 5G AeroMACS network by these systems.

Document data

International classification (ICS): 03.220.50.

Chinese classification (CCS): V54.

Estimated length of the Chinese original: 12,177 words.
