What this standard covers

This standard specifies the test method for the deposition performance of aero-turbine engine lubricating oil (hereinafter referred to as "turbo lubricating oil") on engine bearings under specific temperature, pressure, flow rate, speed, and load test conditions. It includes instruments and equipment, reagents and consumables, test preparation, test procedures, data processing, and reporting. This document applies to the testing of the high-temperature bearing deposition performance of turbo lubricating oil.

Document data

International classification (ICS): 75.100.

Chinese classification (CCS): E34.

Estimated length of the Chinese original: 24,253 words.
