### What this standard covers

This standard specifies the methods and requirements for quantifying the carbon footprint of kerosene components (HEFA-SPK) produced by hydrogenation reforming processes of esters and fatty acids conforming to GB 6537 standard. This includes the purpose of quantification, scope of quantification, inventory analysis, impact assessment, result interpretation, product carbon footprint reporting, and product carbon footprint declaration. This document applies to the carbon footprint accounting, evaluation, and reporting of HEFA-SPK products.

### Document data

International classification (ICS): 75.160.20.

Chinese classification (CCS): E31.

Estimated length of the Chinese original: 14,185 words.
