What this standard covers

This standard specifies the method of calculation and the results of the use of inductively coupled plasma atomic gray iron, calcium, magnesium, potassium, sodium, manganese, phosphorus, aluminum, titanium, barium and strontium reagent material, equipment, test procedure emission spectrometry, precision. This standard applies to coal, coke and coal gangue.

Document data

International classification (ICS): 73.04.

Chinese classification (CCS): D21.

Estimated length of the Chinese original: 9,992 words.
