What this standard covers

This standard specifies the artificial permafrost under hydrostatic pressure test required for consolidation test instruments, equipment, specimens, basic requirements, test procedures and results of calculations. This section applies to the determination of the relationship at a constant hydrostatic pressure and axial exhaust under the permafrost of the degree of consolidation and time, three-dimensional consolidation calculation of permafrost and primary consolidation points.

Document data

International classification (ICS): 73.

Chinese classification (CCS): P70.

Estimated length of the Chinese original: 7,757 words.

Supersedes the earlier edition MT/T 593.3-1996.
