What this standard covers

This standard specifies the dietary calcium determination by atomic absorption spectrometry method. This standard applies to the determination of dietary calcium, does not apply to mineral feed. Quantitative determination of the standard range of 0. 2ms/L ~ 5. 0ms/L. When the sample weight of 1g, constant volume volume of 50mL, the standard method detection limit is 2. 5me/kg

Document data

International classification (ICS): 65.120.

Chinese classification (CCS): B46.

Estimated length of the Chinese original: 6,683 words.
