What this standard covers

This standard specifies a method for simultaneously determining the total alkali content and total fatty acid content in soaps (including liquid soaps). This standard applies to the determination of total alkali content and total fatty acid content in soaps with fatty acid salts as active ingredients. This standard does not apply to compound soaps.

Document data

International classification (ICS): 71.100.40.

Chinese classification (CCS): Y43.

Estimated length of the Chinese original: 12,121 words.

Supersedes the earlier edition QB/T 2623.3-2003.
