What this standard covers

This standard specifies the operating temperature, voltage range, and working reliability of quartz master and slave clocks for ships, describes the corresponding test methods, specifies inspection rules and markings, packaging, transportation, storage and installation, and gives classifications and electrical parameters that facilitate technical regulations. This standard applies to the production, inspection, sale and installation of a master clock and a sub-clock composed of a master clock connected to multiple sub-clocks by wire, and is used as a reference for the production, inspection, sale and installation of other single quartz clocks used on ships.

Document data

International classification (ICS): 39.040.20.

Chinese classification (CCS): Y11.

Estimated length of the Chinese original: 14,181 words.

Supersedes the earlier edition QB/T 4251-2011.
