What this standard covers

This standard specifies the method for determining the content of mobile organic tin in toy materials. The method has a lower limit of 1 mg/kg. This standard applies to the following accessible toy materials: the first type of dry, brittle, powdery or flexible toy materials; the second type of liquid or viscous toy materials; and the third type of toy materials that can be scraped. Packaging materials are not included in the scope of this standard unless they are intended to be retained, such as boxes, containers, or unless they form part of a toy or design has value for play.

Document data

International classification (ICS): 97.200.50.

Chinese classification (CCS): Y57.

Estimated length of the Chinese original: 11,132 words.
