What this standard covers

This standard specifies the methods, reagents and standards, reagents, analytical procedures, calculation of results, recovery, standard deviation and allowable difference for the determination of arginine in toothpaste by high performance liquid chromatography. The standard arginine method detection concentration is 0.5mg / L, the quantitative concentration is 2mg / L; if the sample is taken 0.2g, the detection limit is 250mg / kg, the limit of quantification is 1000mg / kg.

Document data

Chinese classification (CCS): Y43.

Estimated length of the Chinese original: 7,759 words.
